

Abstract

The present invention relates to an interlabial pad which is attached between female labia, especially to the pad which can be used together with the sanitary napkin, further to a wrapping body where said interlabial pad is
5 contained individually in a wrapping container, and the present invention provides an interlabial pad in capable of rapidly directing the menstrual blood which flows down along the inner wall of labia to an absorbent body and in capable of improving the shape fitness (fitness ability) within labia.

The interlabial pad (14) comprises the absorbing sheet and the support
10 sheet (12) backing the absorbing sheet. The absorbing sheet is formed as an aggregate juxtaposing a plurality of strip-type absorbing areas, the absorbing area includes an absorbent body (13a, 13b) which is individually contained in a cover sheet (11a, 11b), and the strip-type absorbing area is formed into an area (14a) contacting with the neighborhood of the ostium vaginae of the user and an
15 area (14b) contacting with an inner wall of labia of the user.
